Overview

Those are the steps we in caring for the plants

1. Sowing
2. First replant
3. düngen
4. 2nd replant
5. ausgeizen

Sowing

We can sow the Plants into the Soil and they will take 3-14 days to germinate.

We can also use some damp paper towel and put the seeds in between. If we use this method, we could sort out weaker plants, and only grow the strong ones. We have to be careful neither to harm the roots not to contermiante the small plants while replanting them into their growing soil, after they developed the roots.
